Plasma Yodha

A COVID-19 Warrior & Savior

Government institutions and private organizations are walking the tightrope between curbing the COVID-19 pandemic and finding a cure for it. While the researchers are going the extra mile to develop a vaccine, plasma therapy has turned out to be a ray of hope for patients who have tested positive.

Applied to scores of other many other medical complications, plasma therapy is the process of separating the plasma from the blood of a recovered person and injecting it into an infected patient. The plasma in this blood has antibodies that are expected to fight external pathogens.

I take this opportunity to thank all Police officers and Citizens who came forward and donated plasma and saved lives. Request all the recovered patients to come forward and donate plasma. One plasma donor saves lives of two suffering patients.

VC Sajjanar, IPS.,

Commissioner of Police, Cyberabad

It is always proved that during the trouble times, it is the humanity which made us win always. While healthcare providers and researchers are doing their bit to develop a vaccine and our doctors fraternity stretching beyond the call of their duties to save lakhs of lives in our country, I humbly request all the recovered Covid patients to come forward magnanimously to donate plasma to save lives of suffering patients.

I salute the officers from Cyberabad Police and Citizens who donated plasma in the recent times helping patients recover and discharging from hospitals with miles of smiles.

Krishna Yedula,

General Secretary, SCSC

What is Plasma Donation?

Plasma donation is quite similar to blood donation, but the process takes more time.

The process entails the collection of blood from the body to separate the plasma. Then the remaining components of the blood are mixed with saline and returned to the body.

Plasma therapy has been around for ages, so the concept of plasma donation is also not new. As a tried and trusted process, plasma donation is usually safe for the donor. Doctors and professionals in accredited centers wield the know how to handle the process well.

Message by COVID Plasma Yodhas

After I donated plasma, people were curious to understand whether it caused any weakness or any other complications. It has been 15 days since I donated my plasma, and I have been going to work ever since. I would like to take this opportunity to request everyone to donate plasma confidently and be a part of a good cause.

M. Srinivasulu

Inspector of Police, Madhapur Traffic P.S

We have been mentally and physically strong, and hence we were able to survive this pandemic. We should come together as a society and give the same strength to people and their families to help save them. Let's contribute and help each other!

K Veera Shekhar

PC NO: 5403, Chikkadpally P.S

It is a myth that plasma donation causes illness. I donated plasma recently and have been going to work, ever since, without any complications. Please donate and help save people!

B. Venkatesh

PC NO: 10276, CAR, QRT

If I can help save people and their loved ones through a small contribution, I would do it every time. I donated plasma without any trouble and I am happy to have contributed to making someone happy.

Ramakanth Singh
Private Employee

When I had COVID-19, neighbours were not understanding or sympathetic. After I donated plasma and saved a life, people began looking up to me and I feel happy about it. I want to contribute a lot more and save more lives.

Srikanth
Chef

I have donated plasma twice and I feel very proud of myself to have helped save the lives of four people. My contribution to the cause is small but I want to ask everyone to donate plasma and help save lives!

P.Uday Kiran Gupta
Businessman

Be a donor. Become a lifesaver.

SCSC and Cyberabad Police are conducting blood/plasma donation drives across Cyberabad. You are requested to come forward donate plasma and save life.
